

## Managed Password Manager

With over 80% of all data breaches coming from the 'human factor', passwords are often the weakest point in your cyber defence, putting your operation at risk.

Our password management solution delivers a flexible and safe way for your team to improve their password hygiene and raise your organisation's security posture, leveraging a zero-knowledge security model keeps all your passwords encrypted and secure.

People are often inclined to use shortcuts to deal with password management, such as writing them down or using easy to guess phrases. This makes it easy for cyber criminals to get access to your business-critical applications and data.

Our password management solution is perfect for:

- ✧ **Making password management easy**, providing you and your team with a seamless way of storing and sharing strong passwords.
- ✧ **Ensuring unique passwords** are always used. You will not be able to use the same password across different accounts, all of which become susceptible when a single account is breached.
- ✧ **Convenience** by automatically filling in stored password details when you visit specific websites, making the experience seamless.
- ✧ **Synchronisation**, allowing passwords to be securely shared across multiple devices and platforms.
- ✧ **Security**, with all passwords stored in an encrypted vault that is only accessible by you.
- ✧ **Password generation**, where strong passwords are automatically generated and applied to accounts for you.
- ✧ **Reminders** to regularly change and rotate passwords for different accounts.

Password management is a crucial aspect of modern cybersecurity. By using tools and strategies to manage passwords effectively, you and your team can significantly reduce the risk of unauthorised access to protect your sensitive data from cyber threats.

## Managed Password Manager Benefits

- ✓ **Enjoy centralised password storage with easy access for your team.**

A password manager provides a centralised, consistent location for your team to store and manage all their passwords. It allows your team to then easily access those passwords securely using multiple devices based on their needs.

- ✓ **Your team can easily ensure that the passwords they use are complex using the integrated password generator.**

By using the integrated password generator, your team can quickly generate complex and randomised passwords, reducing the chance of them being easily guessable.

- ✓ **Additional layers of security can be added by default**

Additional layers of security, such as multi-factor authentication, can be easily integrated and enforced, further protecting you and your team from being hacked.

- ✓ **Secure sharing of passwords becomes both possible and practical**

- ✓ **Provides you with enhanced security through stronger passwords and encryption.**

By using an organisation-wide password manager, you can ensure that the passwords you use within your business are stronger, more complex and unique for each account. You can also ensure that suitable safeguards such as encryption and multi-factor authentication are in place to protect them from unauthorised access.

- ✓ **Improved productivity and reduced password fatigue**

Using a reliable password manager removes the need to remember or retrieve passwords, saving time for your team. Additionally, the auto-fill capability automates login processes, streamlining access to websites and applications. A password manager frees your team from having to remember multiple passwords and reduces the need for frequent and often frustrating password resets due to forgetfulness.

- ✓ **Includes password notifications and alerts**

Any suspicious or unauthorised activities can be spotted using notifications and alerts, with regular reminders being provided to your team to update passwords before they expire.

- ✓ **Brings about efficiencies and provides reliable audit trails and reporting**

Protect your operation with a proven password management solution.

Simplify and strengthen your password administration and enhance your security posture.

## Managed Password Manager Features

- ✧ Provides private, encrypted vaults for everyone to store sensitive data.
- ✧ Allows for shared folders, subfolders and passwords between teams or amongst individuals.
- ✧ Multi-factor authentication and other security policies can be enforced to further protect the solution.
- ✧ Version checks and record histories are available to check and restore records as needed.
- ✧ A password generator is included to produce strong, unique passwords.
- ✧ Secure file storage is available to protect confidential files, documents, photos and videos across devices.
- ✧ Role-based access can be used to restrict password access based on roles or responsibilities.
- ✧ Control score and reports are available to enforce internal checks and meet compliance standards.

## Managed Password Manager Options

- ✧ A basic version or an enterprise level version with extensive integration capabilities.
- ✧ Reporting options.

### Our Technology Partners

## Allowing you to do more

- » Enjoy the confidence and peace of mind knowing you are more secure.
- » Focus on other security challenges.
- » Give your stakeholders confidence that their data is secure.
- » Enjoy access to a scalable password management solution that can grow to meet your changing needs.
- » Satisfy your business, industry and regulatory compliance requirements.
- » Satisfy insurance provider requirements and reduce your premiums.
- » Gain time to focus on the core areas of your operation.
