

Managed SOC

A managed SOC (Security Operations Centre) provides you with the expertise, technology, and expert team required to protect you against evolving cybersecurity threats without the need for significant internal resources.

The team operating a managed SOC is responsible for continuously monitoring and analysing your security posture, detecting potential threats, responding to incidents, and ensuring that security measures are up to date.

By providing continuous monitoring, rapid incident response, and expert management, Managed SOC's help you defend against a wide range of cyber threats, ensuring business continuity and compliance with your regulatory requirements.

A managed SOC is an essential service if you are looking to significantly enhance your cyber security posture without investing heavily in internal teams, tools and processes.

Managed SOC Benefits

Managed SOC services provide continuous, 24/7 monitoring of your IT environment

At scale, the managed SOC provides real-time surveillance of networks, endpoints, servers, applications, and other critical systems to detect and respond to threats as they arise.

Simple cost efficiency

Building and maintaining an in-house SOC is costly due to the need for specialised tools, technologies, and skilled personnel, with a true 24/7 operation. A Managed SOC offers a more cost-effective alternative by spreading these costs across multiple clients.

Rapid cyber security incident response

The combination of continuous monitoring, advanced detection tools, and experienced analysts ensures that incidents are responded to quickly, minimising the potential damage to your operation from cyberattacks. With an experienced expert team constantly available, they will make good decisions by following proven playbooks.

Consistent regulatory compliance

Having a Managed SOC helps you meet your specific regulatory compliance requirements by ensuring that security measures are in place and by providing necessary documentation and reports for audits.

Proven expertise and deep cyber security experience

Managed SOC's are staffed with cybersecurity experts who have experience dealing with a wide range of threats. This expertise is invaluable for you, especially given the range, complexity and sophistication of modern cyber threats.

You benefit from continuous protection

With 24/7 monitoring, Managed SOC's provide continuous protection against threats, ensuring that potential incidents are detected and dealt with rapidly irrespective of when they happen. Knowing that you are always actively being protected should provide superb peace of mind.

Reduced operational burden

By outsourcing your SOC operations, your teams can focus their time and efforts on core business activities, rather than spending time and resources on security monitoring and incident management.

Defend against a wide range of cyber threats with a managed SOC.

Our experienced team of cyber security experts will monitor, respond and manage all incidents.

Discuss your managed SOC needs by calling us on +44 203 034 2244, or emailing hello@cardonet.co.uk

Managed SOC Features

- ⌘ 24/7 cyber security monitoring.
- ⌘ Advanced threat detection and analysis.
- ⌘ Rapid and effective incident response.
- ⌘ Modern threat intelligence integration.
- ⌘ Advanced vulnerability management.
- ⌘ Effective use of automation to protect and defend.
- ⌘ Proactive threat hunting.
- ⌘ Proven scalability and flexibility.
- ⌘ Robust reporting and compliance audit capability.

Managed SOC Options

- ⌘ Robust reporting options.

Our Technology Partners

Allowing you to do more

- ✦ Reduce your worry around cyber threats.
- ✦ Markedly reduce your cyber security risk.
- ✦ Significantly reduce your cyber insurance premiums.
- ✦ Reduce the threat of downtime considerably.
- ✦ Continuously protect your operation from cyber threat, 24/7.
- ✦ Get access to a proven team of cyber security experts.
- ✦ Enjoy stakeholder confidence that you are protected.
- ✦ Avoid any reputational damage from a breach.
